

Wildfire and Egress project

Who: 9 community councils (Abbott Loop, Basher, Bear Valley, Eagle River Valley, East Fort, Eklutna Valley, Glenn Alps, Hillside, and Rabbit Creek)

When: September 2022 — January 2023 (Six 2-hour long meetings)

Actions: Mapping of evacuation locations, shelter-in-place, areas with egress issues, and guest speakers

Wildfire and Egress project

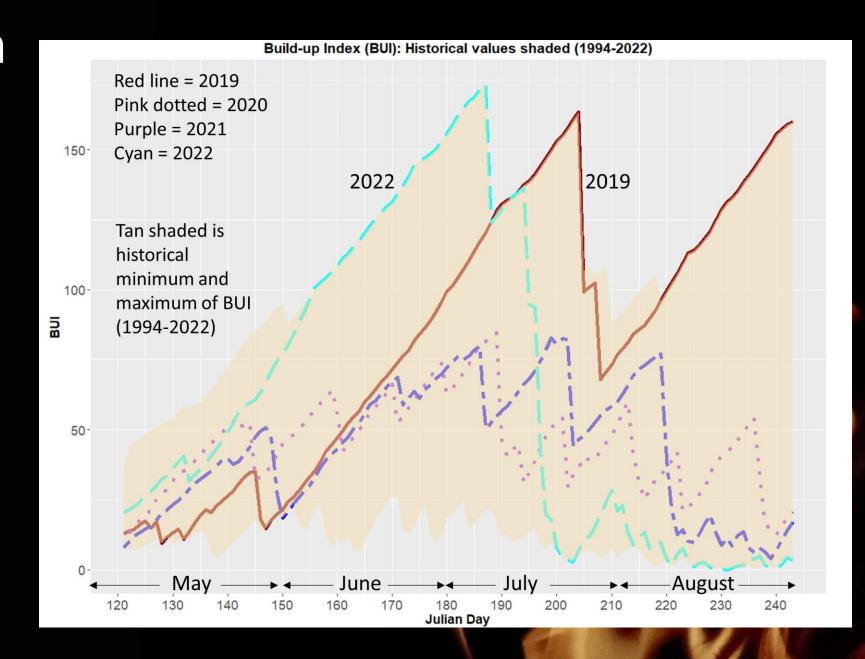

The current Community Wildfire Protection Plan (CWPP) plan has recently been designated for review and updating because it is out of date and no longer meets the stringent requirements for requesting/receiving funding for wildfire mitigation projects.

This work was intended to help jumpstart the CWPP process and work towards getting an update.

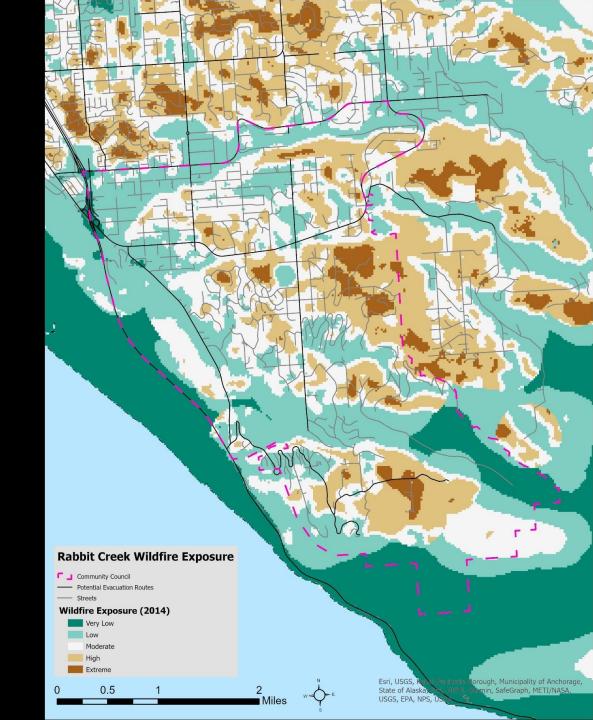

Fire weather in Southcentral

Buildup Index (BUI) is a numeric rating of the total amount of fuel available for combustion.

Wildfire Exposure:

Reflects the potential for wildfire activity. Does not say wildfire will happen or how frequently.

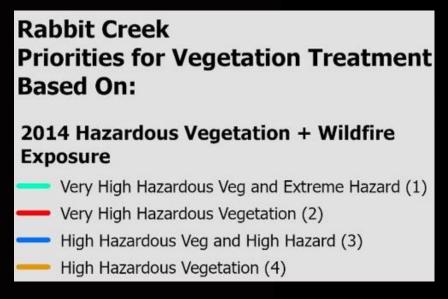

Wildfire Exposure:

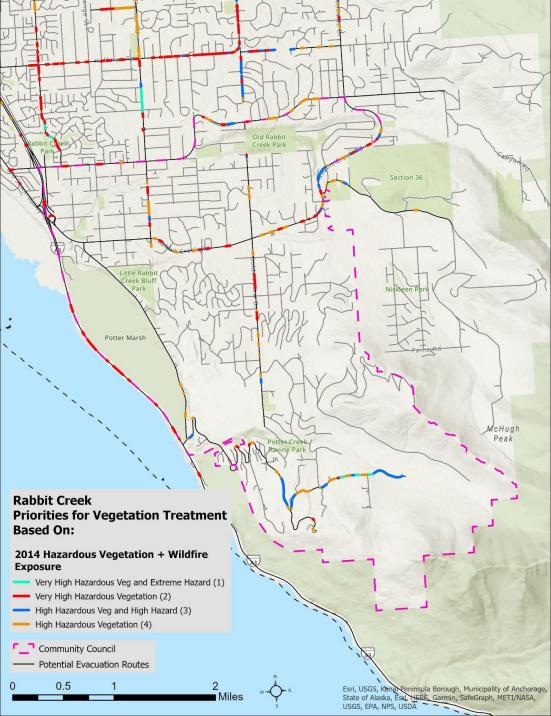

- Exposure 80 and above suggest mitigation actions
- Homes in this area strongly recommended to do Firewise

Evacuation routes identified for vegetation clearing:

Evacuation routes in areas with either high exposure or hazardous fuels.

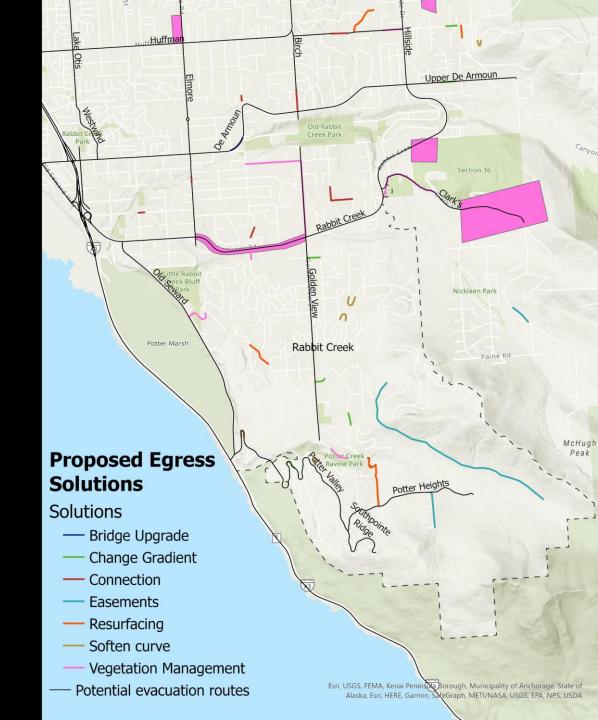

Proposed ideas for solutions to egress issues

Voting on egress improvement ideas

	Number of
Types of suggestions	suggestions
Connections (to be made or improved)	9
Change Gradient/Steep/Oneway/Soften curves	7
Easements (maintain or re-establish)	3
Resurfacing/Upgrade	1
Evaluation or creation of safety zone	3
Fuels reduction/ROW (maintain)	8
Vegetation management (Vegetation thinning)	1
Vulnerable areas to focus efforts to improve egress	
or reduce wildfire hazards	1
Other	13
	46

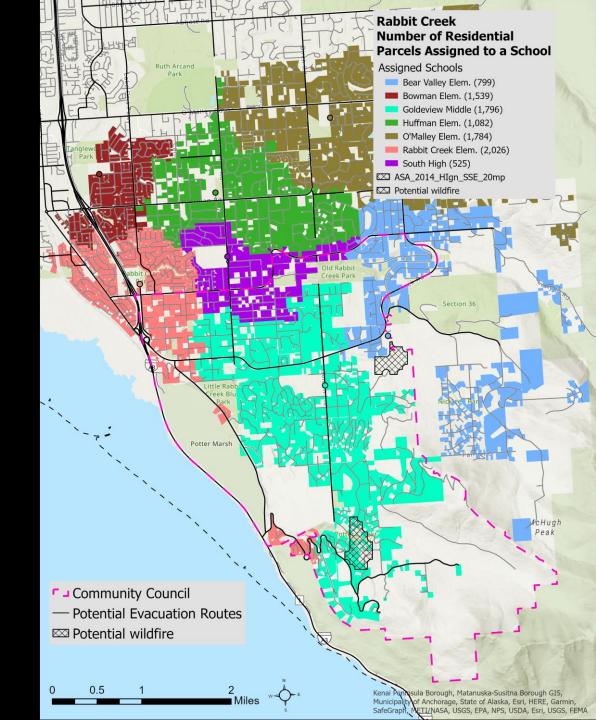

Number of parcels (proxy for people) assigned to schools.

Number of parcels (proxy for people) assigned to schools.

Lesson:

- 1) schools have the potential to get overcrowded and traffic is an issue
- 2) Thought needs to be put into where people will go and how
- 3) Work thorugh some realistic scenarios

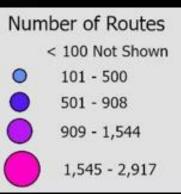

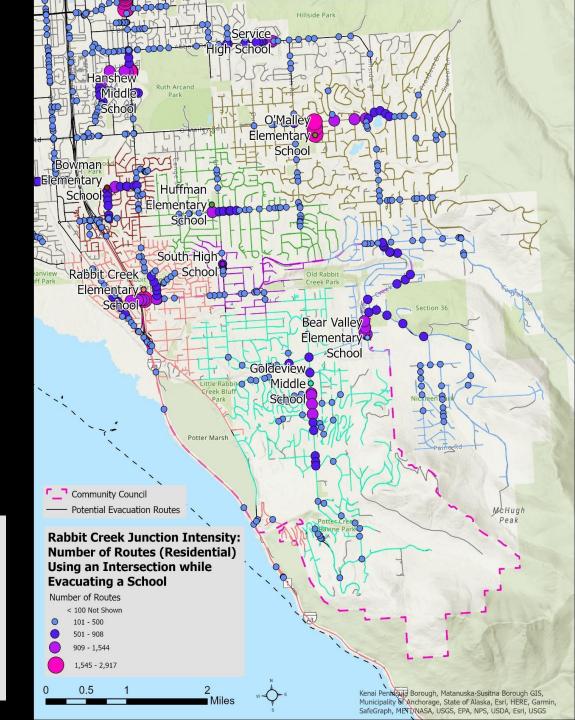

Number of parcels (proxy for people) going through an intersection.

Lesson:

1) schools have the potential to get overcrowded and traffic is an issue

2) Nearer to the evacuation location traffic will always increase

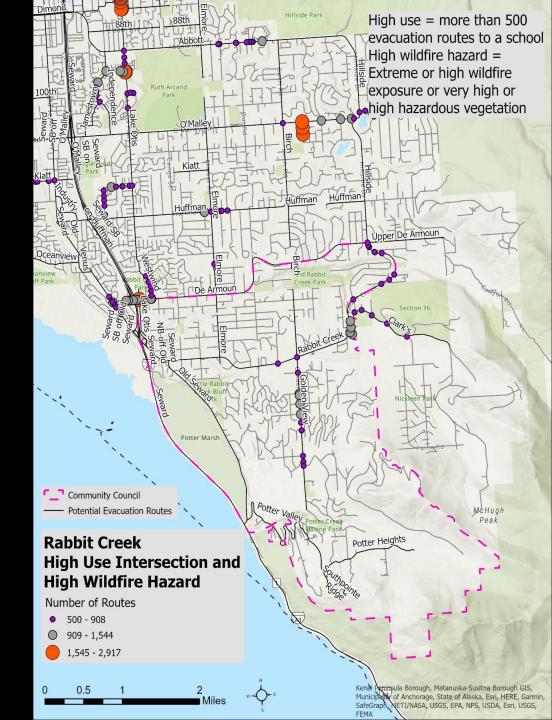

Number of parcels (proxy for people) going through an intersection.

Lesson:

1) could be useful tool to identify intersections that need extra attention (i.e. vegetation clearing, evacuation signs, widening, etc.)

In the end the egress project can help us understand...

- ✓ What is the wildfire risk level where I live? Answer: Refer to **Appendix D**
- ✓ What are some things I should be concerned about for my family's safety if we need to evacuate? Answer: Refer to the Firewise Alaska Booklet, Pages 21-22: Prepare to Evacuate
- ✓ What can I do to improve the chances of my home surviving a wildfire? Refer to the Firewise Alaska Booklet, Page 4, Self-Assessment Checklist: My Firewise Home
- ✓ Is there any help available to assess my property's risk of a wildfire? Yes, Contact AFD, Wildfire Mitigation to schedule an inspection: Schedule a Firewise Home Assessment
- ✓ Can working with my neighbors help to identify or improve egress routes in my subdivision? Yes, Refer to Community Fire Planning: Community Fire Planning Link
- ✓ If I live in an area that is not part of a MOA fire service area, is my wildfire risk greater?

 This may not be an easy question to answer, but generally, your risk is greater if you live outside of a fire service area. Visit your nearest fire station and discuss the issue with the Captain on duty.
- ✓ Is it important to look for a home with fire hydrants or water sources close by? Refer to the Firewise Alaska Booklet, Page 14 for Tips on Creating Your Own Water Supply: Create Your Own Water Supply

Thank you

- Thank you for your time.
- All of the ideas presented are just that, ideas, that still need to be more widely discussed and then valid ideas vetted by experts.
